- Designed and developed comprehensive applications using PHP, MySQL, HTML, CSS, and JavaScript.

WORK SAMPLES

Rentopia (Full Stack Project using PHP,MySQl,HTML/CSS,JavaScript) :
- RENTOPIA is a FULLSTACK modern car rental platform designed to offer a seamless and convenient vehicle rental experience. Whether you're looking for a quick city ride or a long-term rental, Rentopia provides a range of vehicles with transparent pricing, easy booking, and reliable support.
- Allows a User to login/Sign up , choose from a wide variety of cars available and Make a booking Accordingly .
- Allows Admin to access the Admin Panel and Manage Bookings , Testimonials , Contact us queries , Pages Etc.
Pillow and Marshmallow (HTML/CSS,JavaScript ,API Integrations) :
- A webpage for users to come jump in and perform their tasks (assignments, homework etc.)At home, around the sounds provided, to make them feel like they are actually in a surrounding and vibe like that.
- Additionally users can tip 1$ by the means of payement feature provided and can also attach their spotify accounts with webpage to listen to their respective playlists in the webpage , vibe and work. Spotify Button is added (responsive) just in case the user wants to play tracks from spotify instead of preloaded sounds .
- It Uses Api Integrations for the payement (tip me a feather) option and Spotify Button that navigates a user to the respective windows .
 Landing Page (HTML/CSS,Javascript) :
- To highlight a range of web development services, this project includes a straightforward, attractive landing page. With sections for home, about, services, and contact, the layout makes it easy to navigate.
Important Features:
- The page is designed to be aesthetically pleasing on all devices thanks to responsive design.
- An interactive button is a "Get Started" button that, when pressed, sends out an alert.
